

Flowy for Developers

RUN A FLOW FROM CODE

Lesson 3 · Lesson guide

With Ritesh Bucha, Founder, Flowy

The *goal*

Copy a Flow's API example, swap in your own input, and run it from cURL and from Python.

Step by *step*

1 Find the API tab

Flows in the top bar, then Yours.

2 Find the API tab

Read this before calling any Flow you didn't build.

3 Find the API tab

Door, Recipe.

4 Find the API tab

Top line: you need an API key, set as FLOWY API KEY, the one from last lesson. Scroll the contents on the left: authentication, the queue, files, and the full input and output schema.

5 Find the API tab

Copy it, paste it, done.

6 Same call in Python

Click Python. Pick your stack and copy it.

7 Same call in Python

Open the Runs tab. Open one to see its inputs, output and log.

Prompts and *settings*

- Open your Flows: <https://tryflowy.ai/flows?tab=me>

Common *mistakes*

- Sending a local file path as the photo. The API takes a hosted URL.
- Changing the node id in the inputs. Keep product-photo, change only the URL.
- Polling too fast in a loop. Wait a few seconds between checks.
